2026 MODEL 110

1. ACCUFIT™ V2

We all know proper fit of a rifle is key to repeatable accuracy. The re-engineered Savage AccuFit™ V2 system allows for quick adjustments to length-of-pull, comb riser height, and even a custom grip. The new integrated toolless design lets you fine-tune your length-of-pull and comb height in the field. No hassle, no tools. To customize your firearm further, we've included additional grip modules to find the perfect feel.

2. ACCUTRIGGER™

Savage's AccuTrigger™ is the standard by which all factory triggers are judged. The system is easily adjustable, offers a light, clean pull with no creep, and prevents the firearm from discharging if jarred or dropped. Shooters can set the trigger pull to their preferences without having to pay a gunsmith.

3. FLOATING BOLT HEAD

The all-new updated bolt head features a redesigned extractor geometry for a much stronger connection to the case, and we increased the ejector force for faster, more reliable extraction and ejection. The result: rock-solid feeding, confident extraction, and improved reliability shot after shot.

4. ACCUSTOCK™ BEDDING

When a cartridge fires, harmonic waves travel the length of the barrel. This movement affects how the bullet travels. Repeatable accuracy requires a firmly bedded action. The Savage AccuStock™ embeds a rigid rail system in the stock throughout the forend. Rather than connecting the action to the stock with one or two screws, the AccuStock engages the action along its entire length.

5. HEADSPACE CONTROL

At Savage, we set headspace by carefully threading barrels into place with their matched actions and bolts. This hand-fit, zero-tolerance process results in a perfectly matched set that is then locked in with a barrel locknut.

6. PRECISION BUTTON RIFLED BARRELS

Accurate barrels require specialized machinery and experienced operators. Savage proudly employs both. Savage's centerfire barrels are checked and, if needed, hand-straightened by the same skilled craftsman.

7. RECOIL MANAGEMENT

Even the most hardy shooter experiences felt recoil with every shot. With the shooter in mind, Savage teamed up with LimbSaver® to produce a premium recoil pad, so no matter the caliber your shoulder will thank you.

2026 MODEL 110

The longest continuously manufactured bolt action rifle in North America is now even better. The Model 110 family has a fresh look and full of improvements. Select models feature the AccuFit™ V2 system, which lets you lock in a custom fit for fast target acquisition and enhanced accuracy. 2026 110 RF

The all new 110 RF brings 22LR into a full-size platform. Built off the proven 110 action, these new models are designed to perform. Like its big brother, all 110 RF models will be capable of using stocks or accessories designed for a Savage 110 short action firearm. The bolt has been designed with the same headspace control that the 110 is known for. The unique front baffle allows the user to interchange the length of bolt throw. It can be configured for a standard 308 Win length throw or shortened to just a 22LR length throw. This enables the user to cycle the bolt faster with the 22LR length throw or use it to train with the full-length bolt throw just like a 308 Win. Feeding from a 10 round AICS style magazine, the 110 RF's match grade chamber will ensure optimum accuracy shot after shot.

RENEGAUGE™

**A SEMI-AUTO BUILT
FOR RENEGADES**

STOCK ROD BUFFER

The stock rod buffer is designed to reduce felt recoil and extend the life of the action bar assembly.
(Patent pending)

OVERSIZED CONTROLS

The charging handle and bolt release are larger than many factory shotguns for increased ease of use, particularly with gloves.

COMPETITION-READY, EASY LOADING MAGAZINE PORT

The beveled loading port, angled trigger housing, receiver, and elevator are designed for easy and rapid loading of cartridges.

SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.

D.R.I.V

WHITE ARROW - Projectile exiting the firearm.
RED ARROW - Gas needed to cycle bolt carrier.
BLUE ARROW - Excess gas emitted.

D.R.I.V. GAS SYSTEM DUAL REGULATING INLINE VALVE GAS SYSTEM

The first semi-automatic gas operation shotgun manufactured by Savage Arms. The patented self-regulating gas system allows high power and low power loads to cycle with the same consistency and reliability. Savage's dual-valve gas system is designed to emit excess gas, thereby maintaining optimal bolt carrier velocity across various loads.

Reliable operation from 3" Magnums down to low recoil 2 3/4" cartridges.

VENTILATED RIB WITH RED FIBEROPTIC

ONE-PIECE LIGHTWEIGHT BOLT CARRIER

The action bar assembly, including the pusher sleeve, is laser welded to the carrier for increased strength and ease of assembly and disassembly.

BLACK NITRIDE

Provides excellent corrosion-resistance and surface hardness.

Full-length fluting on the barrel provides 9% weight reduction, improves balance, and swing.

2026 RENEGAUGE SEMI-AUTO

Renegaugue proves that you don't have to answer to anything but your instincts. You need gear that can withstand the harsh demands and you don't half-step into anything. Neither does Savage Arms. That's why we went all-in creating the next generation, American-Made semi-auto shotgun built to take everything your world of hunting can throw at it and perform—without fail.
